

Employee Management Portal

Feature Requirements for Walmart Store Operations, VPS Access, Task Notifications, and Salary Management

Prepared for: Development Team

Purpose: Upgrade the existing HR/employee portal to support Walmart store management workflows with secure store assignment, remote VPS access, automated task notifications, and Super Admin salary control.

Current portal modules include Dashboard, Attendance, Tasks, Leave, Late Entry, Employees, Departments, Reports, Roles, Audit Logs, Settings, and Notifications. The new requirements below extend the portal for operational control of multiple Walmart seller stores.

1. Project Objective

The main goal is to ensure each employee can access only their assigned Walmart stores and assigned VPS environments from the portal. Admin and Super Admin must be able to assign or remove access at any time. Task notifications must be delivered by website notification, WhatsApp, and email. Salary management must be available only to Super Admin with attendance, late entry, leave, bonus, deduction, and payment tracking.

Core business requirement: controlled access, clear accountability, secure credentials, complete audit logs, and automated communication.

2. Store Assignment Management

2.1 New Module: Stores Management

Add a new Stores Management module for Super Admin and authorized Admin users.

- Add, edit, delete, deactivate, or reactivate Walmart stores.
- Assign one store or multiple stores to an employee.
- Assign one store to multiple employees when needed.
- Remove employee access from a store instantly.
- View all active, inactive, suspended, and under-review stores.
- View which employee or manager is assigned to each store.

2.2 Store Data Fields

Field	
Store Name	Display name of the Walmart store.
Walmart Seller Center Login ID	Email/login identifier. Password should not be stored in plain text.
Store Status	Active, Inactive, Suspended, Under Review.
Assigned Employee(s)	Employees authorized to view/access the store.
Assigned Manager	Manager responsible for the store.
Assigned VPS	Linked VPS name/IP or credential reference.
Store Category/Type	Example: Beauty, Apparel, Electronics, General Merchandise.
Notes	Internal operational notes/instructions.
Created/Updated Date	System-generated timestamps.

2.3 Employee View

- Employee can see only the stores assigned to them.
- Employee must not see or search unassigned stores.
- Employee dashboard should show My Assigned Stores, store status, related tasks, notes, and Connect to VPS button.

3. VPS and Store Access Feature

3.1 VPS Management

Add VPS Management for secure remote access to Walmart store operations.

VPS Field	
Provider Name	Example: Contabo, AWS, Azure, DigitalOcean, etc.
VPS Name	Internal label for easy identification.
IP Address / Host	RDP host or browser remote desktop URL.
Username	VPS login username.
Password	Encrypted in database; never stored in plain text.
Port	Default RDP 3389 or custom port.
Assigned Store	Linked Walmart store.
Assigned Employee(s)	Authorized users.
Status	Active, Offline, Maintenance, Disabled.
Last Access Time	System-generated log.

3.2 Employee VPS Access

- Employee sees only VPS records linked to assigned stores.
- Add a Connect to VPS button for each assigned store.
- Supported options: generate/download RDP shortcut, open browser-based remote desktop if available, copy IP/username, show credentials based on permission.
- Password should be hidden by default. Super Admin can decide whether employee can view/copy password.
- Optional security: OTP or two-factor check before revealing credentials.

3.3 VPS Security Requirements

- Block all unassigned VPS/store access at backend permission level, not only UI level.
- Encrypt sensitive credentials in database.
- Log every credential view, copy action, and Connect to VPS click.
- Super Admin must be able to revoke employee access immediately.
- Use role-based permission middleware/API guards for every endpoint.

4. Task Assignment and Notifications

4.1 Task Data Fields

Task Field	
Task Title	Short task name.
Task Description	Detailed instruction.
Assigned Employee	User responsible for the task.
Related Walmart Store	Store connected to the task.
Priority	Low, Medium, High, Urgent.
Due Date and Time	Deadline with timezone handling.
Status	Pending, In Progress, Completed, Cancelled, Overdue.
Attachments	Admin can attach files/screenshots; employee can upload completion proof.

Task Field	
Comments	Admin/Manager and employee conversation on the task.
Created/Updated By	System audit fields.

4.2 Notification Channels

- Website notification: bell alert, unread count, clickable task details.
- Email notification: send to employee Gmail/company email after assignment and reminders.
- WhatsApp notification: send to employee WhatsApp number after assignment and reminders.

4.3 Email Notification Content

- Task title, store name, priority, due date/time, task description, and portal login link.
- Email subject format: New Task Assigned - [Store Name] - [Priority].

4.4 WhatsApp Notification Content

Example WhatsApp message template:

New Task Assigned
Store: ABC Walmart Store
Task: Check Account Health
Priority: High
Due: Today 6:00 PM
Please login to the portal and complete the task.

4.5 WhatsApp Integration

- Use Meta WhatsApp Cloud API, Twilio WhatsApp API, or another approved WhatsApp Business API provider.
- Settings page must include API provider, API key/token, sender WhatsApp number, webhook URL, and message template status.
- System should save delivery status: sent, delivered, failed, or pending.

5. Email SMTP Configuration

Add an SMTP settings page under Settings so Admin/Super Admin can configure outgoing email.

SMTP Field	
SMTP Host	Mail server host.
SMTP Port	Example: 465, 587.
SMTP Username	Email account username.
SMTP Password	Encrypted and hidden.
Encryption	SSL or TLS.
From Email	Sender email address.
From Name	Company/portal name.
Test Email Button	Send test email and show success/failure message.

Email events required: new task, task reminder, overdue task, leave status update, attendance warning, and salary notice if enabled.

6. Task Reminder System

The system should send reminders before deadline and after overdue status.

- Reminder options: 30 minutes before, 1 hour before, 1 day before, and after overdue.
- Reminder channels: portal notification, email, and WhatsApp.
- Admin dashboard must show overdue tasks and upcoming deadlines.
- Employees should see countdown or due time indicator on their task list.

7. Salary Management for Super Admin

7.1 Access Control

- Only Super Admin can access full Salary Management.
- Admin/Manager may get limited salary report access only if Super Admin enables permission.
- Employee can view only their own salary slip if this feature is enabled.

7.2 Salary Module Features

- Set employee monthly salary and salary type: Fixed, Hourly, or Task-based.
- Add bonus and deductions manually.
- Calculate absent deduction, late attendance deduction, leave impact, and final payable salary.
- Generate monthly salary sheet and individual salary slip.
- Mark salary as Paid, Unpaid, or Hold.
- Upload payment proof and add payment notes.
- Export salary reports as PDF, Excel, or CSV.
- View salary history month by month.

7.3 Salary Data Fields

Salary Field	
Employee Name	Linked with employee profile.
Department / Designation	Auto-filled from employee profile.
Basic Salary	Monthly or configured salary amount.
Payment Method	Bank, mobile banking, cash, or other.
Salary Month	Month/year for calculation.
Total Working Days	Based on company calendar.
Present / Absent / Late / Leave Days	Auto-calculated from attendance and leave modules.
Bonus / Deduction	Manual or rule-based amount.
Final Payable Salary	System-calculated amount.
Payment Status	Paid, Unpaid, Hold.
Paid Date / Proof / Note	Payment tracking information.

7.4 Calculation Formula

Per Day Salary = Monthly Salary / Total Working Days

Absent Deduction = Absent Days x Per Day Salary

Final Salary = Monthly Salary + Bonus - Deduction - Absent Deduction - Late Deduction

8. Role and Permission System

Role	
Super Admin	Full access: stores, VPS, employees, tasks, salary, reports, roles, settings, audit logs.
Admin	Manage employees, stores, VPS assignment, tasks, reports. No salary access unless allowed.
Manager	View assigned employees/stores, assign tasks, track progress, view limited reports.
Employee	View assigned stores/VPS only, view own tasks, update task status, apply leave, view own attendance and salary slip if enabled.

All frontend and backend actions must be permission-checked. Hiding a button in the UI is not enough; API endpoints must verify role and assignment before returning data.

9. Audit Logs and Security

The portal must save audit logs for sensitive and operational actions.

- Login/logout activity.
- Store assigned or removed.
- VPS credential viewed, copied, or connection clicked.
- Task created, updated, completed, or cancelled.
- Salary created, edited, exported, paid, or placed on hold.
- Employee added, edited, disabled, or removed.
- Role and permission changes.
- SMTP/WhatsApp API configuration changes.

Each log must include user name, action type, date/time, IP address, device/browser, and action details.

10. Dashboard Updates

10.1 Super Admin Dashboard

- Total employees, present today, absent today, pending tasks, overdue tasks.
- Active Walmart stores, suspended stores, active VPS, pending leave requests.
- Monthly salary payable, unpaid salary count, and recent audit log summary.

10.2 Employee Dashboard

- My assigned stores, my tasks, pending/completed tasks, today attendance.
- Upcoming deadlines, notifications, assigned VPS access, and salary slip if enabled.

11. Reports

Required reports should be filterable by date range, employee, manager, department, store, and status where applicable.

- Employee attendance report.

- Task performance report.
- Store assignment report.
- VPS access report.
- Salary report.
- Leave report.
- Late attendance report.

Export formats: PDF, Excel, and CSV.

12. Priority Development Order

Priority	
1	Role and permission update.
2	Store Management module.
3	VPS Management and employee store access.
4	Task assignment update.
5	Email notification and SMTP settings.
6	WhatsApp notification integration.
7	Task reminder system.
8	Salary Management.
9	Reports and exports.
10	Audit logs and security improvements.

13. Acceptance Criteria

- Employee can only see assigned Walmart stores and assigned VPS records.
- Super Admin/Admin can assign and remove store access without developer involvement.
- VPS credentials are encrypted, permission-protected, and fully logged.
- Task assignment triggers website, email, and WhatsApp notifications.
- Reminder and overdue notifications work based on due date/time.
- Salary module is restricted to Super Admin and calculates payable salary using attendance, leave, late entry, bonus, and deduction data.
- Reports can be exported successfully in PDF, Excel, and CSV.
- Audit logs record all sensitive actions.

14. Final Developer Note

Please build this upgrade with strong security, backend permission validation, encrypted credentials, and complete audit logs. The portal will be used for Walmart store operations, so each employee must have limited and controlled access only to stores, VPS records, and tasks assigned to them.
